The show explores themes such as racial profiling and entitlement with its ensemble cast of characters. Hulu announced at the 2015 San Diego Comic-Con International that it will pick up the series for a fourth season. The announcement was made by Heropanti's writer, Arifin Putra, who mentioned that he's been working on the script for over 18 months. The next season would be the third to star *The Flash* actor Grant Gustin as Barry Allen. "The writing is good," said executive producer Keryl Kingsbury during an interview with *Entertainment Weekly*. "It's the best script any of us have read for this particular season. It's great! It'll be interesting to see how they adjust it to fit into the universe, but I think there is a good chance that it will. We're hopeful." On November 8, 2015, Netflix announced that they would bring back *Heroes* with Season 4 released on March 25, 2016. *Heroes Reborn* is the first series to be produced by Netflix and was announced at the San Diego Comic-Con on July 23, 2015. NBC severed its ties with the show after season 3 aired in 2014. Despite being canceled by NBC, *Heroes* has been licensed to Hulu and was renewed for a 13-episode fourth season slated for 2019. Executive producer Tim Kring said that "the new chapter of *Heroes Reborn*" takes the story of the Spirit of the Hanover family into a thrilling new direction." Showrunner Tim Kring described the fourth season as a "completely new adventure" with a different cast of characters. Cast member Masi Oka revealed that *Reborn* will include a "jumping-off point" that is not based on or tied to any previously published material from creator Tim Kring's *Heroes* universe. He further described the series as more character-driven rather than plot-driven. In discussing the concept with Kring, Oka stated that the story would be very different from any of the previous seasons. The series is set in a world where a mysterious substance called "phoenix ash" has been discovered in a small town in Arizona. The ash contains an untapped energy source that gives its users special abilities. A large corporation looking to capitalize on this potential power source discovers the substance and with their large corporate resources uses an experimental process to extract it from its host and market it as a power booster. In retaliation, several people turn violent and start killing those who have been experimenting with the product, resulting in global chaos and anarchy.
